

THERMOPPOINT™

STEAM TUNNEL

The new Axon ThermoPoint™ Steam Tunnel is designed to handle the most challenging of packaging shapes! Built with three separate zones that can be set independently to different steam rates, heights and angles, the ThermoPoint™ creates the highest quality shrink possible.

Graduated indicator dials allow precise, repeatable adjustment of steam concentration in each zone.

Steam injectors can be adjusted in four axis on each side of each zone. Graduated indicators make duplicating adjustments simple, precise and repeatable.

Double shell design keeps outside machine temperatures cooler.

Steam evacuation flues allow independent regulation of steam and temperature in each zone.

Features & Benefits

- **Maintenance Friendly** - Side panels on both sides give easy accessibility to inside of tunnel
- **Modular** - Available in 3- and 6-zone configurations
- **Ease of Use** - Scaled manifold adjustments for shrink optimization
- **Flexibility** - One machine creates high quality shrinks on a wide variety of container shapes and sizes
- **Intuitive Design** - Easy and repeatable setups and simplified changeovers
- **Easy Changeover** - Only Allen wrenches required
- **Safe** - Double shell design keeps outer temperatures of machine cooler
- **Durable** - Stainless steel construction
